

Figure S1: Silver stained SDS-PAGE of purified GTFs and PC4 used in the work. TBP, TFIIB, TFIIA, PC4, RNAPII and TFIIF were analyzed in a gradient gel (4 – 14% polyacrylamide). TFIIE and TFIIF were analyzed in a 10% SDS-PAGE. Arrow indicates the position of the protein band associated to each TBP, TFIIB or PC4. α , β and γ indicates the subunits of TFIIA, TFIIE and TFIIF factors.
