
Title

Association of Sitting Time With All-Cause and Cardiovascular Mortality: How Does Frailty Modify This Association?

Abstract

To investigate how frailty modifies the association of sitting time with all-cause and cardiovascular mortality in Chilean adults. This prospective study included 2,604 participants aged ≥ 35 from the Chilean National Health Survey 2009–2010. Sitting time was self-reported, while frailty was assessed using a 36-item Frailty Index. Sitting time was categorized as low, medium, and high. Cox proportional hazard models were used to estimate the risk of mortality stratified for the sitting time categories. Over a median follow-up of 8.9 years, 311 participants died, 28% of them due to cardiovascular events. Frail people with prolonged sitting time were at higher risk of all-cause and cardiovascular mortality (hazard ratio 3.13; 95% confidence interval [2.06, 4.71] and hazard ratio 2.41; 95% confidence interval [1.50, 3.64], respectively). The observed risk was higher in women than men. Public health and individual strategies should be implemented to decrease sitting time across the population, with special attention on frail people. © 2024 Human Kinetics Publishers Inc.. Funding Texts

The authors thank all participants for their cooperation and the Chilean Health Ministry and Department of Public Health, the Pontificia Universidad Católica de Chile for commissioning, designing, and conducting the second National Health Survey 2009\2010. Financial Support: The CNHS 2009\2010 was funded by the Chilean Ministry of Health and led by the Department of Public Health, the Pontificia Universidad Católica de Chile. This research did not receive any funding from agencies in the public, commercial, or not-for-profit sectors. Ethical Approval: The CNHS 2009\2010 was funded by the Chilean Ministry of Health and approved by the Ethics Research Committee of the School of Medicine at the Pontificia Universidad Católica de Chile (No. 16\2013019). Data Availability Statement: These data were derived from the following resources available in the public domain: website of the Epidemiology Department of the Ministry of Health, Chile: <http://epi.minsal.cl/encuesta-ens/>. Author Contribution: Diaz-Toro conceived the study, analyzed the data, and wrote the first draft. Nazzal Nazal and Petermann-Rocha assisted in the analysis and provided comments and

edits. Nazar, Diaz, Concha-Cisternas, and Celis provided comments and edits. All the authors approved the final version.
