

# Protein and starch granule extraction from from corn [Extracción de Proteínas y Gránulos de Almidón del Maíz]

Ana S.

Bruno P.

Renaly A.

Starch biosynthesis occurs through the action of enzymes. The resulting starch may be classified into two types, transitory and reserve, defined by their utilization by plants. This RESEARCH work analyses the extraction process of protein and starch granule from Corn. © 2019, Universidad del Zulia. All rights reserved.
